

# Exercise Instructions

## Two options to import the sources:

1. Using Maven with a pom.xml which will be supplied
2. Create your own project and include the supplied sources

After importing the sources to your IDE, please implement two functions in BinayTree class:

- `serializeTreeInternal`
- `deserializeTreeInternal`

After implementing, please run the unit tests supplied, and verify they pass without error.

The exercise was written using IntelliJ IDEA and was tested with Eclipse as well.

You have 4 hours to complete the exercise and send it back - please send the entire project zipped.

**Good Luck!**
